Lomma 2019-10-28

Nexam Chemical improves capacity

Nexam Chemical is now significantly expanding the capacity of its production facility in St Andrews in Scotland. The project has already been partly initiated and will lead to a doubling of capacity, with the possibility of further improvements to the capacity at a later stage. Nexam Chemical is also investing in some improvements to the production facility in Lomma, Sweden. In total, approximately SEK 10 million will be invested. Both of these projects are scheduled to be completed in the summer of 2020.

At Nexam Chemical in St Andrews, active ingredients are manufactured for many of the products the company sells.

"The volume increase that Nexam Chemical is currently in, requires the expansion of our plants so as not to stop. Being able to improve the capacity of our facilities is something that we have planned for a long time and that we hoped would become a reality. Now we see that we really need this capacity and will therefore implement the expansion," says Johan Arvidsson, CEO of Nexam Chemical

About Nexam Chemical

Nexam Chemical develops technology and products that enhance the properties of polymers in terms of strength, impact resistance, temperature resistance, chemical resistance and longevity. This means lighter, stronger, smarter and more durable materials. Nexam Chemical was founded in 2009. The company has deep roots in the research world from both NASA's space program and Ideon in Lund. Today the headquarters are in Lomma. The company is in a strong growth phase and had sales of SEK 110 million in 2018. Production takes place in Scotland, Sweden, Hungary and Poland. Nexam Chemical is represented by dealers and agents throughout Europe as well as in North America and Asia. The Company's Certified Adviser is FNCA Sweden AB. More information about the business can be found at www.nexamchemical.com.
