

The return of softwarepatch.com

Uniblue launches the new IT industry resource: softwarepatch.com; an informational site offering useful, free downloads.

The screenshot shows the softwarepatch.com website. At the top, there is a navigation menu with links for Home, Browsers, Drivers, Free Software, Games, Graphics, Internet, Office Suites, Tips, and Windows. Below the navigation is a search bar and a main banner area. The banner contains a section titled "Encountering problems installing software drivers for your devices?" with a "Start Scan Now" button, and a "Recommended Download" section for DriverScanner 2012. Below the banner are three main columns: "Patches" (Finding your patch), "Secure" (Is it safe to download?), and "Free Download" (What is a patch?). Each column has a brief description. The "Patches" section includes a note about software release schedules. The "Secure" section includes a note about file safety. The "Free Download" section includes a note about patch safety. Below these columns are three sections: "Latest Updates" (listing Firefox 6.0.2, Internet Explorer 9, Brother DCP-L235, and Alps Pointing Device), "Top Downloads" (listing DirectX 9, Windows 7 Service Pack 1, Phoenix Windows driver update software, and Flash Player 10), and "Contact" (a form with fields for Name, Email, and Message). At the bottom, there are links for "Download DJ Mixing Software", "Network Patch Management", and "Video Capture Software".

Northampton, UK 1st June, 2012 - The online bible for all matters software-related, softwarepatch.com has just been re-launched – now offering a host of new and improved features. Using specialist feedback and the latest developments in technology, the site has been redesigned to better serve and reflect the needs of its users.

Having moved towards a more dynamic design and improved usability, softwarepatch.com is the secure, free and comprehensive resource for software patches and updates. The site offers a one stop library to help users – from novice to professional - solve all their PC needs and consequently optimise their operating system. User security is a primary concern; therefore the site advocates transparency and safety by only linking to manufacturers' websites, offering improved download security ensuring peace of mind.

New features of the site include a fresh design, easier navigation with a smarter interface and updated content – all of which aims to serve a wider variety of users' needs. Sharing and social functionality has also been added to facilitate the ever-growing value of social media. Users are now able to search for the solution they need via a custom Google search bar which gives faster and more comprehensive results too.

In conclusion, the site also offers a wide-ranging selection of free software downloads, covering all essential user needs from PC maintenance, browsers and media players to securing data, preventing performance obstacles and much more.
