thyssenkrupp's Heritage, Innovation and Services on Display at 2017 CONEXPO-CON/AGG in Las Vegas

Company experts highlight latest industry offerings, from crushing equipment and conveying systems to undercarriages and track systems, in two booths – B91525 and C20327

LAS VEGAS (March 2, 2017) – thyssenkrupp, the global technology and industrial group, will highlight its latest products, technology and solutions at CONEXPO-CON/AGG 2017 in Las Vegas, from Tuesday, March 7 through Saturday, March 11 at the Las Vegas Convention Center.

As an established engineering, equipment, component and service provider, thyssenkrupp's exhibits will focus on its capabilities for the construction, quarry and aggregates industries. thyssenkrupp specialists will be onsite to discuss its broad product line, including crushing and processing equipment; conveying systems; and undercarriage systems, tracks and components.

"In today's construction and aggregates industries, we are seeing an increased demand for solutions that combine operational efficiency, reliability and cost effectiveness," said Peter Sehl, Vice President, Mining, thyssenkrupp Industrial Solutions (USA). "Our unique expertise, deep-rooted industry knowledge and extensive product portfolio allow us to deliver optimum technical and economic solutions that address every challenge and satisfy our customers' requirements."

Standard machines: readily available, cost-efficient solutions from a single source

To meet the demand for readily available machines, thyssenkrupp now offers standard versions of its machines at competitive prices with significantly reduced delivery times. thyssenkrupp's extensive range of aggregate materials processing equipment includes crushers, screens and feeding devices. Used for primary, secondary and tertiary crushing of granite, basalt, limestone and other hard rock, these machines can be combined into modular systems to accommodate customers' specific applications and operational needs.

On display at the thyssenkrupp Industrial Solutions exhibit in the Bronze Hall (Booth B91525) will be the 10-ton Kubria® F/M 90, from thyssenkrupp's recently upgraded and standardized Kubria series of cone crushers. thyssenkrupp drew upon its expertise in cone crusher development and manufacturing to optimize the proven Kubria design and further increase throughput rates.

Undercarriage systems and components: maximizing earthmoving machinery investments, increasing work life

March 2, 2017
Page 2/3

Undercarriage systems and components from Berco of America, a thyssenkrupp company, ensure manufacturers and construction equipment operators get the most out of their earthmoving machinery investments. Located in the Central Hall (Booth C20327), the Berco of America exhibit will utilize cutting-edge 3D model imagery to highlight its extensive line of track chains, rollers, idlers, sprockets and track shoes.

Continuous investments in new product development allows Berco to deliver better performing, longer life solutions for both manufacturing customers and those looking for a unique aftermarket option. One such investment highlighted at the Berco booth is the Robustus™ track system. By utilizing a rotating bushing design to reduce friction and wear, Robustus tracks have an increased working life of 6,000 hours, as compared to most standard track systems, which can only withstand 3,000 hours of duty.

In addition, company specialists can speak to the recently upgraded seals for the Berco Pin Retention 2™ (BPR2) system. The enhanced system maximizes track life and reduces maintenance costs by preventing end-play generation and increasing the sealability of the joint. The BPR2 system is recommended for heavy duty applications such as large construction and demolitions, as well as conditions that generate large loads and impacts.

Innovative service solutions couple advanced technology with customers' business needs

Building upon its long-standing industry expertise in engineering, procurement and construction, thyssenkrupp offers customers solutions throughout the entire lifecycle of their operations. By utilizing a proactive and holistic approach, thyssenkrupp's service solutions help increase performance, drive continuous improvement and reduce total cost of ownership.

"Individual support for every customer has always been one of our core values," said Amy Reichert, President, Berco of America. "From maintenance and onsite training to revamps and spare parts supply and management, we collaborate with customers to develop tailored service solutions that meet the individual needs of their industry, operation and application."

The global network of Authorized Berco Dealers ensures customers continue to receive the high-quality undercarriage products they need and the support and training they expect. In addition, thyssenkrupp Industrial Solutions' global network, including regional service centers in North America, as well as numerous local workshops held across the globe, offer assistance everywhere when it comes to the maintenance and overhaul of crushing and processing equipment.

About thyssenkrupp Industrial Solutions:

The Industrial Solutions business area of thyssenkrupp is a leading partner for the engineering, construction and service of industrial plants and systems. Based on more than 200 years of experience, we supply tailored, turnkey plants and components for customers in the chemical, fertilizer, cement, mining and steel industries. As a system partner to the automotive, aerospace and naval sectors, we develop highly specialized solutions to meet the individual requirements of our customers. Around 19,000 employees at over 70 locations form a global network with a technology portfolio that guarantees maximum productivity and cost-efficiency.
