

US Federal Government Agency Expands AI Deployment with IRIS+ Enterprise

Gothenburg, Sweden – September 17, 2025 – Irisity AB (publ), a provider of AI-driven video data management software, received contract for a fifth site deployment.

This contract included a one-year renewal with ongoing upgrades for the existing four sites. The contract received in Q3 was for a total one-year value of 1.6M SEK with 1.2M recognized within Q3. It is an Annual Recurring Revenue (ARR) contract, marking the fourth year of the agency relying on this deployment which is provided in partnership with a federal government contracting provider.

The AI software deployment is used for perimeter security of highly secured government buildings which are used for diplomatic purposes. To meet the high cyber security standards, Irisity's IRIS+ AI software deployment was modified to support the governments hardening and Red Hat Linux requirements compared to Irisity's standard deployment which uses Ubuntu Linux.

Many enterprise and government customers require on-premise solutions which are deployed in air gapped sites and require a customizable server-based software solution to meet their IT and cyber security standards. The America's sales team continues to work closely with the agency and contracting provider on plans for further expansions and software requirements.
