

Planmeca Viso® enters a new era with three advanced new imaging units

*For 20 years, Planmeca has been breaking new ground in dental 3D imaging. The company's R&D has been innovating cutting-edge imaging devices as well as harnessed CBCT technology for dental diagnostics and treatment planning since 2005. Now, Planmeca is excited to lead the industry to the next 20 years of dental imaging and technological advancement, as spearheaded by the **Planmeca Viso®** product family. The company is pleased to announce three powerful new Planmeca Viso imaging systems, which will all debut at IDS in Cologne on 25–29 March 2025.*

The **Planmeca Viso® G1** imaging unit is the latest addition to the range of **Planmeca Viso®** CBCT devices and a genuine powerhouse that has been designed to meet the diverse needs of today's dental clinics. The unit comes with a smaller volume size and has been furnished with top-of-the-line sensor technology, an intuitive graphical user interface, as well as effortless patient positioning.

The robust and reliable Planmeca Viso G1 is able to produce consistently great images even with heavy daily workloads. With a Field of View (FOV) up to 11 x 11 cm, Planmeca Viso G1 offers all the essential imaging programs, from panoramic to 3D dental and TMJ imaging programs. Additionally, the device can be equipped with an effective one-shot cephalostat, adding still more capabilities for cephalometric analyses and orthodontic treatment planning.

As with all Planmeca Viso 3D units, the new unit is further complemented by several proprietary solutions. These include **Planmeca CALM®**, Planmeca's revolutionary algorithm for motion artefact correction, and the scientifically proven **Planmeca Ultra Low Dose™** protocol, which enables CBCT imaging at significantly lower effective patient doses without a statistical reduction in image quality.

At the same time, the Planmeca Viso family is also expanding into the world of 2D imaging with two new devices. **Planmeca Viso® 2D Pro** and **Planmeca Viso® 2D Classic** are two incredible imaging units that make Planmeca's tried-and-true Viso technology available to 2D imaging users around the world. Both combine an intuitive user interface with easy patient positioning and phenomenal image quality for a truly seamless user experience.

"Planmeca has always been a pioneer in the dental industry, and our sights are firmly on the horizon even now," states **Timo Müller**, Vice President of Planmeca's X-ray division. "We strongly believe in the Planmeca Viso product family, as bolstered by our satisfied Viso customers in nearly 80 countries around the world. The new devices have once again been developed while listening closely to user feedback and suggestions – with patient safety and diagnostic image quality always as the top priority in line with our Ultra Low Dose philosophy. Viso is, quite simply, the future."

All the new devices combine seamlessly with the renowned **Planmeca Romexis®** all-in-one dental software as well as the **Planmeca Insights™** IoT solution for clinic analytics, predictive maintenance planning, and uptime optimisation.

The new Planmeca Viso devices will be introduced alongside other Planmeca product innovations at IDS 2025 in Cologne on 25–29 March (hall 1, booth A30–C39).
