

## Planmeca's new intraoral scanner now available – Planmeca Onyx™ offers unforeseen flexibility for every clinic

*Planmeca Onyx™ is Planmeca's brand-new intraoral scanner designed to deliver exceptional precision and true operational flexibility for every dental clinic. Featuring advanced optical technology and seamless data capture, the scanner ensures precise geometry and exceptional detail for all clinical indications. Planmeca Onyx supports both wired and wireless operation, offering true flexibility and convenience for every user and workflow. Now available for orders!*

First revealed at IDS 2025, the **Planmeca Onyx™** intraoral scanner is now available for orders. Designed for clinical environments where efficiency, accuracy, and adaptability are essential, the scanner brings advanced performance and exceptional usability to every dental workflow.

Planmeca Onyx combines high-tech optics and powerful LED lighting with intelligent software to capture digital impressions with precise geometry and detail. All scanning is performed and processed directly within the **Planmeca Romexis®** software platform, which provides comprehensive tools for diagnostics, dental analyses, treatment planning, and patient communication.

### **Unmatched flexibility for any workflow**

Built on years of user feedback and deep understanding of clinical workflows, Planmeca Onyx delivers unforeseen flexibility for different clinical environments. Dental professionals have complete freedom in how they approach intraoral scanning: they can scan in any order and in as many segments as needed. The result is a smooth, predictable experience for both clinicians and patients.

Supporting all clinical indications from dental check-ups to restorative and orthodontic cases to implantology and maxillofacial surgery planning, Planmeca Onyx is suitable for every member of the dental team, regardless of specialty. The scanner moves effortlessly from room to room and is instantly ready for use on any Romexis workstation in the clinic network after a one-time setup. The scanner can also be used wirelessly or with a cord, allowing users to choose the mode that best fits their workflow.

### **Seamless part of Planmeca PULSE™**

As part of the **Planmeca PULSE™** digital ecosystem, Planmeca Onyx integrates seamlessly with Planmeca's comprehensive CAD/CAM offering, ensuring smooth digital workflows and supporting excellent clinical outcomes. Scans captured with Planmeca Onyx are instantly available on all Romexis workstations for treatment planning, restoration design, and clear aligner consultations. Designs can then be transferred directly to **Planmeca PlanMill®** milling units or **Planmeca Creo® X** 3D printer for high-precision manufacturing.

"With Planmeca Onyx, our goal was to create a scanner that adapts to the way clinicians work – not the other way around. We believe that Planmeca Onyx is an intraoral scanner that every dental practice deserves. Its flexibility, accuracy, and integration with Planmeca PULSE make it an exceptional choice for any modern dental practice," says **Pontus Degerlund**, CAD/CAM Director at Planmeca.

Manufactured in Finland at Planmeca's modern production facilities, the scanner benefits from strict quality control, advanced production methods, and decades of engineering expertise. Combined with continuously updated scanning software, this ensures long-term durability, reliability, and a truly future-proof investment for dental professionals.
