New Planmeca Romexis® Cloud service enables easy image transfer from professional to professional

Introducing Planmeca Romexis® Cloud – an image transfer service integrated into Planmeca Romexis® software. The service allows dental professionals to share their images and expertise securely with others.

Planmeca Romexis® is a comprehensive 2D and 3D dental imaging software suite used by dental professionals for all their imaging needs. Planmeca is proud to introduce **Planmeca Romexis® Cloud** – a new subscription-based image transfer service for sending patient 2D or 3D images to others. The service is a seamless part of the Planmeca Romexis software making it an excellent addition to the daily workflow.

Users of Planmeca Romexis software can now share images and documents with minimal effort via a Planmeca Romexis Cloud subscription. Information is securely transferred into the cloud and the recipient is automatically notified of new cases requiring his attention. Recipients can download and view images at no cost using Planmeca Romexis or its free viewer version – a light-weight software that can be run without installation.

“This new service offers different professionals an easy way to share 2D and 3D images, reports, referrals and other attachments. From dentist to radiologist, from radiology center to dentist, from colleague to colleague and even from dentist to patient – all information is shared easily and securely. It is no longer necessary to send CDs or DVDs. This helps our customers to streamline their workflow,” says Ms **Helianna Puhlin-Nurminen**, Vice President of Digital Imaging and Applications division at Planmeca Oy.
