

Press release

12 March 2013

Planmeca introduces a radically new dental unit concept – Planmeca Sovereign® Classic

Planmeca extends its product range with a new high-tech dental care unit. The Planmeca Sovereign® Classic offers incomparable user-friendliness and flexibility for every field of dentistry. This digital unit combines intelligent infection control and usability wrapped up in beautifully slim and compact design.

Clever design details

Planmeca Sovereign® Classic has been designed with ergonomics, comfort, and usability in mind. The workflows of both the dentist and assistant have been carefully considered in the unit's design in order to offer the best possible ease of use for both of them. The compact and slim cuspidor makes the unit the perfect choice for any treatment room.

Perfect ease of use

The user can easily customise his personal settings and instrument preferences from the straightforward, multilingual touch screen with clear symbols and texts. The instrument functions can also be carried out using the unit's robust foot control.

The unit has a 6-position instrument console where the user can easily plug a customisable selection of instruments. Thanks to the manual left/right swivel function of the cuspidor and chair, the unit can be easily positioned to fit any treatment room and working style. The handy and modular **Flexy™** holder for suction tubes and additional instruments supports all treatment needs.

Intelligent infection control

Planmeca Sovereign® Classic offers the most advanced infection control systems. The user can choose either periodical cleaning or continuous disinfection for his dental unit. All the necessary elements for infection control routines are perfectly organized into logical compartments and easily accessible for the dental team.
