aXichem announces: Tecno beef in Brazil takes a further three tonnes of aXiphen® ruminant

[aXichem AB](#) (publ), (aXichem), which develops natural analogue feed additives and dietary supplement ingredients, announces a further delivery of three tonnes of aXiphen® ruminant ([phenylcapsaicin](#)) to [Tecno beef](#), a leading Brazilian precision nutrition company serving the livestock farming industry. The delivery is made from the local stock of aXichem's distributor Chr. Olesen.

Deliveries of aXiphen® ruminant started in May this year, with the first six-tonne shipment delivered to Tecno beef. Tecno beef has begun using the product in its formulations, and with the present delivery the total volume delivered to Tecno beef is nine tonnes.

Under aXichem's commercial model in Brazil, product is shipped from Sweden to aXichem's distributor, Chr. Olesen, which holds stock locally and supplies Brazilian end-customers directly. Deliveries to Tecno beef are made from that local stock. As previously communicated, an order with delivery during the fourth quarter is in place to supply continued demand in the Brazilian market.

Lucas Altepost, Deputy Managing Director and VP Sales & Marketing at aXichem, comments:

"It is positive that Tecno beef continues with aXiphen® ruminant and is now taking a further three tonnes. This is the type of development we aim to achieve in Brazil, where customers begin using aXiphen®, experience its benefits, and continue to incorporate it into their operations. Together with the order for delivery in the fourth quarter, we have the volume in place to supply the market."

About Tecno beef

Tecno beef, headquartered in Bebedouro, São Paulo, was founded in 2017 to bring precision nutrition to the Brazilian beef cattle industry. Today Tecno beef targets both the beef cattle segment and the dairy cattle industry. The company designs customized núcleos and premixes for every productive cycle of cattle, operating a 100 percent automated production system that today supplies feed solutions to approximately one million animals across Brazil. Production currently runs at around 5,000 tonnes per month, and Tecno beef has positioned

itself among the leading names in the Brazilian cattle nutrition segment, competing directly with established international brands.

About phenylcapsaicin and aXiphen®

The health benefits of chili, with its active ingredient capsaicin, have been known for centuries. aXichem's proprietary molecule, phenylcapsaicin, combines the naturally occurring phenyl group with capsaicin, bridged by a triple bond. The result is an innovative natural analogue of capsaicin with high purity, where the pungency is greatly reduced.

aXiphen® (phenylcapsaicin) is approved and registered in Brazil as a feed additive for use in feed for poultry, pigs and ruminants.

The information was submitted, through the provision of the specified contact person, for publication on 31 August 2026, at 14:00 CET.

About aXichem

aXichem develops, patents, and markets natural analogue industrial chemicals, i.e., synthetically produced substances that have similar and comparable properties to natural substances. The company's first product is phenylcapsaicin, which the company commercializes under two brands, aXiphen® and aXivite®, as an ingredient in animal feed and dietary supplements, respectively. The business is divided into three market areas with different applications for phenylcapsaicin: as an ingredient in feed for poultry, such as chicken and turkey, and for ruminants; as an ingredient in food supplements for gut health, weight control and sports and exercise; and as an ingredient in food supplements for the bio-enhancement of curcumin and melatonin. aXichem is listed on the Nasdaq First North Growth Market. Certified advisor for aXichem is Västra Hamnen Corporate Finance AB. More information is available at www.axichem.com.
