

Bravida Finland awarded additional installation contract for XTX Markets’ data center complex in Kajaani

Bravida Finland has been commissioned to carry out the electrical installations for the second data center on XTX Markets’ Kajaani campus. Bravida previously completed the electrical installations in the project’s first data center.

The data center project in Kajaani is being developed by the British algorithmic trading firm XTX Markets. Bravida will be responsible for installations in server halls as well as the implementation of process electricity. The contract has been signed with YIT, who serves as the main contractor for the project.

“We are pleased to continue our cooperation with YIT and XTX Markets. The experience gained from the first data center helps us streamline the execution and provides a strong foundation for delivering high quality. This is a large scale and demanding project, where close collaboration between all parties is essential,” comments Teemu Honkonen, Project Manager of Electrical Branch in Oulu at Bravida Finland.

Janne Salmenoja, Vice President, Data Centers at YIT, comments:

“Our cooperation with Bravida has got off to an excellent start. Together, we have developed ways of working that contribute to efficient execution and high quality for the end customer. Our strong partnership and shared understanding of the specific requirements of data center projects provide a solid foundation for successful delivery.”

Bravida’s work for the second data center is already underway, and the project will be completed in 2027.
