

Peace of mind reimaged – Gunnebo launches the EverydaySafe™

Under the Chubb safes brand, Gunnebo presents a game-changing innovation: the EverydaySafe™. Developed using world-class safe storage expertise, this ingenious security solution is a patented* product. It has been designed to flexibly and discreetly integrate into kitchen, bedroom or office furniture units alike, ensuring users' valuable items are protected in a completely concealed manner and at the same time being easily accessible.

The EverydaySafe™ is conveniently accessible, yet completely hidden as neither a handle is needed, nor is the safe's locking system visible. The forward-thinking biometric fingerprint scanner and mobile app provide both functionality and protection. This enables the EverydaySafe™ to be opened by the user in a few seconds, as well as providing an encrypted tracking of user activity.

The application of this security solution is highly versatile. It can be built into a kitchen, bedroom, hotel or office environment, integrating and blending seamlessly into the furniture. Indeed, it *becomes* part of the furniture. That is the simple, effective logic behind the new EverydaySafe™.

"It is an innovative solution that resolves the everyday security concerns of people in their homes or during travel and at the same time provides an excellent way for companies to uphold their clean desk policy." says Stefan Syrén, President & CEO, Gunnebo.

Indistinguishable from standard drawers, cupboards or cabinets, the safe is a high-tech appliance that acts as an attractive addition to existing furniture designs. It adapts designs simply, subtly and safely, providing a multi-layered security system. Not only does the EverydaySafe™ protect and safeguard against burglary of stored items such as passports, cash, jewellery and watches, it also provides a solution against copying credit card data or car keys via sophisticated high-tech theft devices. The safe is equipped with an anchoring technology providing assurance against attempts to forcibly remove the safe from the furniture. The EverydaySafe™ is built with a certification security standard, ensuring trusted protection of its contents. Opened using a mobile phone app or via biometric fingerprint identification, the EverydaySafe™ includes a signal-blocking Faraday cage to prevent car theft through remote access of your car key frequency.
