

PRESS RELEASE

14 September 2017

Recipharm and Kancera collaborate to manufacture clinical trial supply

Recipharm, a leading contract development and manufacturing organisation (CDMO) and Kancera, a development company focused on cancer therapy, have signed a contract for the development and manufacture of the pharmaceutical candidate KAND567.

Kancera's pharmaceutical candidate KAND567 works by blocking the Fractalkine system and has been shown in preclinical disease models to effectively counteract the onset of autoimmune disorders, as well as neuritis and pain in connection with chemotherapy against cancer. In future clinical studies, Kancera intends to treat patients with the pharmaceutical candidate KAND567 filled into capsules and taken orally.

As part of the collaboration, Recipharm will develop the preparation that is required for effective release of KAND567 from the capsules, as well as manufacturing the pharmaceutical product. The work will be performed at Recipharm's development facility in Solna.

Torkel Gren, General Manager at Recipharm in Solna commented: "We are happy to be able to contribute to the development of a new drug with the potential to be of great medical value. We have extensive experience in developing drugs for clinical trials as well as commercial manufacture and this will be very valuable in the collaboration with Kancera."

Thomas Olin, CEO of Kancera said: "The decision to commence development of capsules for an active dosage of KAND567 shows that Kancera has reached an important milestone in the Fractalkine project. We are delighted to now be collaborating with Recipharm to produce the pharmaceutical product that will be used to study how KAND567 can help patients."

About Kancera AB

Kancera develops the basis for new therapeutics, starting with new treatment concepts and ending with the sale of a drug candidate to international pharmaceutical companies. Kancera is currently developing drugs for the treatment of leukemia and solid tumors, by regulating the immune system, blocking survival signals in the cancer cell and on addressing cancer metabolism. Kancera's operations are based in the Karolinska Institute Science Park in Stockholm and the company employs around 18 people. Kancera shares are traded on NASDAQ First North and the number of shareholders was more than 7500 as of June 30th, 2017. FNCA is Kancera's Certified Adviser. Professor Carl-Henrik Heldin, Professor Håkan Mellstedt, and MD PhD Charlotte Edenius are board members and Kancera's scientific advisers.
