

Press Release

Getinge introduces Torin OR Management software globally

Gothenburg, Sweden on February 3rd, 2020

Today, Getinge globally launches Torin – a complete OR management software that helps surgical departments advance their surgery planning, execute efficiently on the schedule, and continuously improve the utilization of resources in and across collaborating departments.

“Torin will make a difference for all hospitals that are looking to work more efficiently with their surgical planning and daily management of appointments. With Torin, Getinge provides one tool for both optimized long-term planning and reliable real-time execution. The goal is to minimize disruptions, reduce costs and improve patient care,” explains Charlotte Enlund, Vice President Integrated Workflow Solutions at Getinge.

The user-friendly scheduling tool promotes planning, prioritization, and rescheduling of both day-to-day and long term appointments. Torin automatically checks for resource and staff conflicts to avoid double bookings as well as inconvenient and expensive waiting time. Additionally, it provides a business intelligence tool that enables management to identify trends and potential inefficiencies and act accordingly.

“Overall, Torin creates a calm environment for the patients, as they get to experience the reassurance of a well-organized hospital with surgeries that run on time and that always have the necessary resources and staff available in the right place.”

Torin is available in three levels, that each focuses on different hospital needs. Torin Planning is the user-friendly planning tool with visual overviews for optimized surgery scheduling and increased OR utilization. Torin Progress level it up by also ensuring on-time execution of the daily schedule and complete documentation of all surgery steps.

“Then we have Torin Optimization, which captures and provides access to an extensive business intelligence tool, allowing hospital management to learn from their data and further optimize the way their surgical department is run.”
