### Getinge launches superfast indicators to further ensure patient safety

Today Getinge introduces a new range of consumables for sterile reprocessing. Getinge Assured Superfast 20 Biological Indicator speeds up the ability of the Central Sterile Supply Department (CSSD) to release loads safely, ensuring that the sterile instruments can be in the right place, at the right time.

Every sterile reprocecessing department must achieve throughput, accuracy, and validated credibility to support both the hospital processes and ensure patient safety. With the new *Getinge Assured Superfast 20 Biological Indicators*, accurate and consistent results allow the CSSD staff to proceed with confidence in 20 minutes.

“Patient safety starts in the CSSD, as it is crucial for any hospital that sterile instruments are received by the end user in a safe and timeous manner. With our new indicators it takes only 20 minutes to ensure a crucial element of patient safety in steam and hydrogen peroxide processes. The fast, clear and accurate results prove that the correct process parameters for the in-activation of microorganisms were present in the sterilizer chamber,” says Cindy Graham, Senior Director Consumables at Getinge.

The speed of incubation allows sterile reprocessing departments to increase hospital workflows, improve productivity and assure the supply of sterilized instruments.

“When testing can be done this quick and the results are easy to interpret, it provides the CSSD with effective and clear evidence that each load is safe and sterile. In this way our Superfast 20 Biological Indicators help minimize the impact of hospital acquired infections due to cross-contamination,” says Cindy Graham.

The Getinge Assured Express Incubator has eight wells that can be used to process indicators for both steam and hydrogen peroxide processes at the same time. In addition, it has a QR code scanner that helps minimize errors in the incubation setup, and a convenient connection port at the back keeping wires out of the way.”

The touch screen on the Getinge Assured Express Incubator indicates the status of each incubation well and visual alarms signal if an error should occur. There is also a cover to protect the incubation wells from dust and debris when the incubator is not in use.

The new Superfast 20 indicators are compatible with most brands of steam and hydrogen peroxide processes sterilizers and comply with ISO 11138. They are available globally with the exception of North America and pending local registration and certification requirements.

**About Getinge**

With a firm belief that every person and community should have access to the best possible care, Getinge provides hospitals and life science institutions with products and solutions aiming to improve clinical results and optimize workflows. The offering includes products and solutions for intensive care, cardiovascular procedures, operating rooms, sterile reprocessing and life science. Getinge employs over 10,000 people worldwide and the products are sold in more than 135 countries.

This document is intended to provide information to an international audience outside of the US.
