

## Press release

Gothenburg, Sweden, July 24, 2020

### Getinge to become CO<sub>2</sub> neutral by 2025

**Today Getinge announces its intention to become a CO<sub>2</sub> neutral company by 2025. The target will be reached by a stepwise approach in several areas and supports the company's objective to contribute to a sustainable health care environmentally as well as socially.**

To secure long-term value-creation and competitiveness, sustainability is an integral part of the organization, actively working to minimize the negative environmental footprint. Getinge is committed to achieving the Paris agreement goals of limiting global warming to 1.5 °C above pre-industrial levels, and has now made the decision to become CO<sub>2</sub> neutral by 2025.

“In 2012 we started changing the products' environmental impact over the product life cycle through our EcoDesign principles”, says Mattias Perjos, President & CEO. “This covers all steps from the extraction of raw materials to production, distribution and use, all the way to recycling and disposal. Now we take this a step further, going all CO<sub>2</sub> neutral”.

One product built on the EcoDesign principles is the S-8668T model in the 86-series Washer-Disinfectors. The S-8668T was developed to increase reprocessing throughput within the Central Sterile Supply Department (CSSD). With the turbo multitasking technology available for the S-8668T model, processing time can be cut by up to 25% and thereby reduce overall consumption of energy, water and chemicals.

“It is our responsibility to do our outmost to provide our customers with safe and sustainable products,” Mattias Perjos continues. “Within our product offering, we now have a number of products such as the steam sterilizer GSS610H, PowerLED II surgical light and the Flow family of anesthesia products that build on our EcoDesign.”

Equally important is Getinge's work to significantly reduce its CO<sub>2</sub> emissions in production. Between 2010-2018 the direct and indirect emissions were reduced by 29% (ton CO<sub>2</sub> /MSEK).

To reach the new target to become a CO<sub>2</sub> neutral company, Getinge has set-up various activities. For example, switching to renewable energy sources (green electricity) and investments in green certifications, but equally important to update the vehicle fleet, travel routines and finding new and smart logistics alternatives.

“The decision to become all CO<sub>2</sub> neutral in five years’ time is a natural step for us and will be part of the entire organization’s operations,” says Mattias Perjos. “We will continuously analyze, validate and add activities related to our environmental efforts to ensure we reach our target.”

Getinge’s activities to become CO<sub>2</sub> neutral will be externally validated through a third party auditor, PwC. To learn more about Getinge’s current Sustainability activities, please visit [the Sustainability Update Report 2019](#).
