### Getinge extends the Servo-c ventilator with a neonatal option

**Getinge announces the extension of its Servo-c ventilator with a neonatal option, transforming it into a universal solution that supports respiratory care for all patient categories – from fragile premature newborns to fully grown adults.**

Since its launch, the Servo-c ventilator has earned praise for its modern appearance, intuitive design and great versatility. Now, Getinge is taking the offering to the next level.

“Hospitals are under increasing pressure to deliver high-quality care for diverse patient needs while managing costs. Servo-c now supports this by enabling personalized respiratory treatment across all patient categories – from premature newborns to full grown adults – with full flexibility in targeted markets. This is part of our commitment to make life-saving technology accessible for more people,” says Cecilia Sjöstedt, Vice President Critical Care at Getinge.

The new neonatal option is designed to support premature born babies weighing as little as 500 grams, without requiring additional physical accessories. Additionally, it offers invasive leakage compensation and complies with the latest international standards for product safety, biocompatibility, and cybersecurity.

“Since our first Servo ventilator was introduced over 50 years ago, our focus has been on continuous innovation, better outcomes, increased patient safety and outstanding user experience. We are proud of our legacy and remain committed to leading the way in developing ventilators for the future,” Sjöstedt says.
