Getinge boosts cleanroom efficiency with modern interface for cGMP washers and sterilizers

Getinge is advancing efficient cleanroom operations in the biopharma industry by integrating a new open and flexible visualization system in its new generation cGMP washers and sterilizers.

SIMATIC WinCC Unified, Siemens' latest open interface, offers a unified solution for effortless integration of both Getinge washers and sterilizers - delivering efficiency and ease of use.

"Meeting the digitalization challenges in the pharmaceutical industry is one of our priorities. The integration of one common easy-to-use interface for controlling and monitoring all Getinge washers and sterilizers translates into smooth and future-proof cleanroom operations for our customers. Unified processes will also ensure simplified procurement and ease of validation," says Marcus Persson, Product Line Manager – Digitalization & Automation Getinge Life Science.

In addition to efficient and streamlined operations with less training needed, the integration of SIMATIC WinCC Unified in Getinge's washers and sterilizers also helps ensure efficient data management with more secured integrity.
