

Clavister updates InControl 2.0 with Zero Touch provisioning

Clavister provides Managed Security Service Providers (MSSPs) with a rapid and cost-efficient way of onboarding Clavister NetWall Next-Generation Firewalls with its latest innovation.

Örnsköldvik, Sweden, February 19, 2019. Clavister, a leader in high-performance cybersecurity solutions, announces a major innovation and offering in its Clavister InControl 2.0 software with Zero Touch functionality.

Zero Touch is the Managed Security Service Provider (MSSP)'s answer to secure a rapid and cost efficient on-boarding of new managed Clavister NetWall customers and those building out their Secure SD-WAN. The Clavister NetWall Next-Generation Firewalls can be shipped from the factory directly to the installation site and be installed by a non-tech user using Zero Touch. Once connected to the network, appliances will automatically find their way directly to the InControl server hosted by the MSSP and can be fully and seamlessly configured. For communication of configuration parameters, the connectivity is direct between InControl and NetWall—providing highest level of confidentiality.

“With scarcity of skilled resources and requirements from clients for rapid onboarding, the Zero Touch provisioning functionality with InControl 2.0 provides simplified onboarding without delays to perform staging procedures.” says Mattias Nordlund, Product Manager InControl, NetWall and cOS Core.

Offered as software to run in multi-tenant mode in the MSSP's private cloud environment and offered at no additional charge, Clavister InControl 2.0 requires minimum time to get started and saves cost immediately. InControl 2.0 is furthermore equipped with a fresh new graphical look and performance optimisations and is downloadable as of now from MyClavister.
