

Clavister Chooses City Networks Cloud Platforms to Transform Product Offering

Örnsköldsvik, Sweden, March 4, 2019. Clavister, a leader in high-performance cybersecurity solutions, announces that it has chosen City Networks to be its provider of a new cloud based products platform.

Clavister, which supplies cybersecurity products and services worldwide, is actively expanding its product portfolio and as part of this, aspects of the company's security solutions will be offered as a cloud service. As a base for delivering these services, Clavister will use City Networks public cloud service, City Cloud.

"As part of offering world leading cybersecurity solutions to our customers, we're constantly evaluating both our products and services, including how we distribute them to our customers. With City Cloud we get a platform that both offers us the flexibility and scalability in the form of a cloud-based IT infrastructure that we need, while also letting us work with a European partner who shares Clavister's values regarding openness, security and focus on innovation," says John Vestberg, CEO of Clavister.

Clavister and City Network have previously had a collaboration where City Network uses parts of Clavister's services to secure both City Cloud and the company's cloud service for regulated organizations, Compliant Cloud.

As part of the partnership, City Network will also offer its customers access to Clavister's cybersecurity services.

"All companies in all industries are affected by digitalisation and must change their businesses to continue to be competitive. By using City Cloud as a base for delivering its cloud-based cybersecurity services, Clavister has not only complemented its delivery model of IT security services, they have also created a scalable and flexible platform for their continued innovation," says Johan Christenson, CEO and founder of City Network.
