

## Clavister: New CSP Order to Americas based Mobile Operator

**Örnsköldsvik, Sweden, February 5, 2020.** Clavister, a leader in high-performance cybersecurity solutions, has received an initial order worth approximately 3 MSEK for security products to an Americas based mobile operator. The order was secured through one of the world's largest mobile infrastructure providers, meaning that Clavister now has go-to-market ability for its telecom cybersecurity solutions through two of the three incumbent providers.

The mobile operator has selected Clavister for a three-phased deployment. This initial order refers to a datacenter installation of Clavister NetWall next-generation firewalls, scheduled for the first quarter of 2020. In the second and third phases, the customer plans to deploy Clavister's virtualized firewall software, which provides for high-performing and scalable cybersecurity for the mobile core network. The full deployment is a multi-year project with opportunities for upgrades, additional use-cases and other services to be introduced.

"We are honored to be selected once again to deliver critical security components to modern mobile networks. This is a good testament to the performance and quality of our solutions," states Clavister President and CEO, John Vestberg. "The mobile telecom industry has seen a substantial ramp-up of 5G radio design wins over the past year. We look forward to seeing those wins going commercial and getting complemented with 5G-based mobile core networks. It is in that context where the mobile operators clearly benefit from our virtualized security solution." he furthers.
