Skanska to expand traffic corridor in Del Mar, California, USA, for USD 57M, about SEK 530M

Skanska has signed a contract with the City of San Diego for the El Camino Real Half Mile to Via De La Valle Project in Del Mar, California, USA. The contract is worth USD 57M, about SEK 530M, which will be included in the US order bookings for the third quarter of 2026.

The project will expand the heavily traveled corridor by widening El Camino Real to four lanes and replace the existing 84-year-old San Dieguito River Bridge. Construction will improve drainage infrastructure and reduce flooding risks while protecting the corridor from future erosion along the San Dieguito River. Riverbank stabilization improvements will further strengthen the corridor's long-term resilience.

The project scope will introduce a range of upgrades, such as separated bike lanes, new sidewalks, improved traffic signaling and an equestrian-friendly trail beneath the new bridge. Together, these improvements will enhance mobility and safety for motorists, cyclists, pedestrians, and equestrians while providing a more reliable connection between Del Mar, Solana Beach and surrounding communities.

Work is slated to begin in December 2026 and is expected to reach completion in August 2030.
