

## Advenica has won yet another order from a Nordic authority equivalent to 1 MSEK

The Malmö-based cybersecurity company Advenica has demonstrated the great value of their solutions and ensured yet another order on the company's VPN products (Virtual Private Network) that guarantees secure transfer of information while protecting its integrity.

Advenica's VPN products have a design that resists quantum computing and eliminates the threat of the encryption solution being infiltrated. This makes the VPN products a future-proof investment. Advenica is one of four companies worldwide that has received the highest certification of its VPN technology by the EU. The VPN encryption meets the high requirements that for instance governments and military have on their security for IP-based networks. This order will be delivered during the first quarter of 2017.

“Our network encryption is a fantastic solution that really takes this type of technology to new heights. This is confirmed by new and existing customers continuing to invest in our solutions, in fierce competition with the largest suppliers in Europe.”

**Einar Lindquist, CEO, Advenica AB**

“Advenica continues to meet the strict requirements on technology, trust and delivery capacity held by military, government bodies and operators of critical infrastructure. Our long term work with developing business outside of Sweden also bears fruit, something this order is a good indication of.”

**Andreas Häglund, Sales Director National Security, Advenica AB**
