

Advenica launches new unique products in the Data diode family

New products from Advenica give more organisations the opportunity to ensure a unidirectional information exchange and this way be able to protect their most valuable information. The new products have the same performance as current solutions but have a more compact size. One of the products is now on display at SEC-T in Stockholm on September 19-20.

A data diode prevents intrusion and maintains the integrity of the network while preventing information leaks and maintaining the confidentiality of the network. The high assurance solution protects assets for companies within businesses such as critical infrastructure and the defense industry.

Advenica already offers two different models of data diodes. These existing models have national approvals in several countries and in Sweden, Advenica also has component assurance approval at level N3.

Now the family is expanded with additional products, based on the same high-assurance technology with optical separation. The new products have the same high performance as Advenica's other data diodes with the great advantage of being significantly more compact. This makes them easier to place and, combined with the lower price, it makes them more accessible to more customers.

The new product comes in two models - one aimed at IT environments and one with a clear focus on SCADA environments.

One of the new products will be available at SEC-T in Stockholm on September 19-20. More information about the products will soon be available on Advenica's website.

This is an important launch for us with fantastic products that make the technology of data diodes more accessible to more customers. Protecting their valuable information and being able to exchange data securely is something that every organisation that works with sensitive information needs. The new products show that Advenica is a leading player when it comes to high-assurance solutions for customers with high information security requirements.
