

## Advenica receives order worth MSEK 1.1 from Finnish customer

Advenica, a leading European provider of cybersecurity solutions, has received a new order for development of services for high assurance cybersecurity solutions from a Finnish customer.

Connecting systems with critical information to other networks pose a great security risk and security measures must be taken to prevent intrusion and to maintain the network integrity. Advenica's Cross Domain Solutions enable strictly controlled and filtered information exchange between domains with different security or protection needs, for instance databases, servers, applications, or combinations.

The new order, placed by a Finnish customer, concerns development of Cross Domain Solution services. Delivery of the new order will start immediately and will be completed during Q3 2020.

The nature of the industry and the circumstances regarding the delivery and the customer means that further information about the end customer will not be published.

*We see a growing demand for high-assurance solutions that safeguard valuable information. Our products have national approvals and meets the highest demands on both security and assurance. They make it possible to effectively mitigate the cybersecurity risks while enabling information transfer.*

*Mikael Puska, CEO Advenica Oy*
