

Advenica Data Diode achieves Common Criteria Certification

Advenica, a Swedish leader in cybersecurity solutions, is proud to announce that the [Advenica Data Diode DD1G](#) has successfully achieved Common Criteria EAL4+ certification, reinforcing Advenica's commitment to delivering security that organisations can fully trust. This milestone highlights Advenica's continued commitment to developing solutions that meet the highest international standards, at a time when cyber threats are growing worldwide and international certifications are becoming increasingly important alongside national cybersecurity certifications.

Common Criteria (ISO/IEC 15408) is an internationally recognised framework for evaluating and certifying the security of IT products. Achieving Evaluation Assurance Level 4+ (EAL4+) demonstrates that the product has been methodically designed, tested, and reviewed, with additional security enhancements beyond the standard EAL4 requirements.

This certification demonstrates not only the strength of our technology, but also our long-term commitment to internationally recognised security standards. As we are increasing our efforts globally, international certifications such as Common Criteria play an increasingly important complementary role to national certifications, giving customers worldwide trust in our solutions.

Rickard Nilsson, COO at Advenica

The Common Criteria certification provides added confidence for our customers that this data diode – designed, developed, and produced in Sweden – has been validated against stringent security standards. The product stands today as the only product of its kind in Sweden to meet this internationally recognised security standard.

About Common Criteria EAL4+

EAL4+ is widely recognised as the highest level that is both commercially practical and suitable for deployment in high-security government and critical infrastructure environments. It provides strong, independently validated assurance that security mechanisms are correctly implemented and resistant to sophisticated threats. This certification streamlines procurement in security-sensitive environments, supports regulatory and compliance obligations, and provides independent assurance that security has been designed and verified at every level.
