

Enviro's Basic Design for complete recycling plants is now ready

The Basic Design developed by Swedish cleantech company Enviro in cooperation with ÅF has now been completed. In addition to technical and economic analysis, the purpose of the project has been to provide documentation that meets the guidelines and regulations for this type of recycling facilities for tyre disposal in Europe and Chile and in many other international markets.

"We have already benefited from the preliminary foundations in the dialogue with Chinese Vanlead and several other stakeholders. The basic Design report is an important and firm sales tool with drawings, process descriptions, a detailed implementation plan and delivery conditions for complete recycling plants" says Thomas Sörensson, Managing Director of Enviro.

The collaboration with ÅF is now entering a new phase when the Basic Design project is complete and the completed reports can be presented to potential recycle plant customers.

"In addition to the facility in Åsensbruk, the Basic Design project is the most important investment we have made. Now we have commercially accepted recycled materials, patented technology and an excellent tool for presenting and implementing plant projects."

Basic Design is an advanced template Design that includes the fundamentals for developing good calculations covering all aspects of finance, technology and installation. Customer dialogue can therefore focus more on local conditions and quickly identify solutions for effective implementation.

"Exactly how much time we save in each individual project is difficult to say, but it's several months per project only during implementation. In addition to increased efficiency, Basic Design is a platform everyone will feel safe working with. The underlays have already led us to pack and present a lot of concrete and professional material in the dialogue with Chinese Vanlead, which led to a MoU."

It is primarily for European and Chilean conditions that the Basic Design report is developed as these markets are of special interest. Though, the report provides a better and faster implementation phase regardless of market and some adjustments always need to be made to local requirements and rules.

Enviro is an environmental company that offers profitable recycling of tyres and provides processed materials, primarily to the rubber industry. The company sells complete environmental plants to industrial investors and also runs its own plant for worn-out tyres in Åsensbruk, Sweden. Enviro was founded in 2001 and has its head office in Gothenburg; it has 20 employees and is listed on the Nasdaq First North with Mangold Fondkommission AB as certified advisor. www.envirosystems.se

"During the summer, we have used parts of the Basic Design Report as the basis for a number of new quotes and the response has been very positive. We already have a unique position on the market with our continuous supplies of recycled materials, we now strengthen our position significantly in terms of sales."

The sections of the report focusing on Chile also serve as a basis for reporting for the contributions Enviro was awarded by Chilean government organization CORFO in the autumn of 2016.
