About Scandinavian Enviro Systems

Enviro is a company developing, building and operating industrial plants for material recovery from End of Life Tyres (ELT). The company has developed a process, based on a patented technology, where gas generated in the process is heating the tyres in absence of oxygen. This enables the materials in the tyres to decompose and be recovered instead of incinerated. Thus, a sustainable recovery of the resources Carbon black, Oil, Steel and Gas is obtained. The gas is used as energy to run the process. The products are sold on the market to be used in new products, replacing fossil resources to help the customers reach their sustainability targets. The company intends to establish and operate profitable industrial plants based on the patented technology internationally as owner or co-owner.
