# Construction permit application submitted for Enviro's planned facility in Uddevalla

Scandinavian Enviro Systems AB (publ) ("Enviro", "the company") has submitted an application for a construction permit through the property owner, Fratera, for the planned recycling plant in Uddevalla, Sweden.

The construction permit application pertains to the previously announced recycling plant that the company plans to establish on an industrial site in the Lillesjö district of Uddevalla Municipality. The application follows the environmental permit for the planned facility, which was granted to Enviro in June of this year, and which was also previously announced by the company. The facility will have the capacity to process up to 60,000 tonnes of end-of-life tyres per year, which would suffice for the recycling of half of Sweden's total annual volume of end-of-life tyres.

A final decision on establishment of the new plant is dependent on several factors, such as securing access to end-of-life tyres and agreements covering deliveries of recovered materials.

Scandinavian Enviro Systems contributes to enhanced environmental and economic sustainability using a patented technology for the recovery of valuable raw materials from scrapped and end-of-life products, including tyres. The production of new tyres using carbon black recovered with Enviro's technology reduces carbon dioxide emissions by up to 93 per cent compared with the use of virgin carbon black. Enviro has its head office in Gothenburg and a plant for the recycling of end-of-life tyres in Åsensbruk. The largest owner is the French tyre manufacturer Michelin. Enviro was founded in 2001 and is listed on Nasdaq First North Growth Market.
