STOCKHOLM, SEPTEMBER 1, 2025

RaySearch launches RayIntelligence® v2025

RaySearch Laboratories AB (publ) today announced the release of RayIntelligence® v2025, a major update to its oncology analytics system designed to transform clinical data into actionable insights. With new tools for building customized dashboards and deeper integration across RaySearch's product portfolio—including RayStation® and RayCare®—the system enables clinics to continuously learn from patient journey data and improve treatment outcomes.

In most clinics, large volumes of oncology data are scattered across separate systems, which makes evidence-based improvements slow and fragile. By directly connecting to primary oncology data sources, RayIntelligence helps institutions learn from their own data and adapt their practice, assets, and skills on a continual basis.

With the new customization tools, clinics can create dashboards that reflect their operations and priorities, from plan quality trends and machine utilization to protocol adherence and outcome signals. RayIntelligence v2025 provides a single, comprehensible intelligence layer that equips clinical teams to run a self-improving oncology program, enabling clinics' readiness today and tomorrow.

Johan Löf, founder and CEO, RaySearch, comments: "Our vision for RayIntelligence has always been clear: to transform oncology data into a continuous source of insight. With v2025, we take a significant leap forward. By absorbing and processing data from every stage of the patient journey, the system empowers clinics to refine their treatments and operations over time—building a smarter, more adaptive oncology program for the future."

About RaySearch

RaySearch Laboratories AB (publ) is a medical technology company that develops innovative software solutions for improved cancer treatment. RaySearch markets the RayStation® treatment planning system (TPS) and the oncology information system (OIS) RayCare®. The most recent additions to the RaySearch product line are RayIntelligence® and RayCommand®. RayIntelligence is an oncology analytics system (OAS) which enables cancer clinics to collect, structure and analyze data. RayCommand, a treatment control system (TCS), is designed to link the treatment machine and the treatment planning and oncology information systems. RaySearch's software has been sold to over 1,100 clinics in 47 countries. The company was founded in 2000 as a spin-off from the Karolinska Institute in Stockholm and the share has been listed on Nasdaq Stockholm since 2003 (STO: RAY B). More information is available at raysearchlabs.com.

About RayIntelligence

Data-driven oncology represents a new era in healthcare. RayIntelligence® is an innovative cloud-based oncology analytics system that gives meaning to data, empowering cancer centers to reach new levels of personalized care through insights based on real-world data.
