ARTESANÍA DE GALICIA

Artesanía de Galicia is a trademark which represents contemporary craft-ers from Galicia, in the North West of Spain. It involves high-quality prod-ucts, carefully designed, in which a fascinating story lies in each: the roots of our culture combined with contem-porary design, the personality of the crafters and the mastery of their hands. As a result, this reflects the awareness in the maker's decision-making dur-ing the creation of the piece. Crafts become an excellent option for the interior design, which can enhance an environment, not only aesthetically but giving it a personality, a touch of exclu-sivity and authenticity. A wide range of products under the label Artesanía de Galicia takes advantage of the mate-rial itself and creates pieces where the rough material has a leading role.

OUR COLLECTION

Artesanía de Galicia presents a range of home decor products, with ceramic, basketry, textile and wooden pieces based on pure and simple lines and the quality of the materials. We show a wide range of our more traditional pieces as we are convinced they are not just up to date but at the cutting edge of contemporary trends in inte-rior design. We have decided to recover these traditional designs as we are completely certain they correspond to contemporary design trends. The sim-plicity, purity and authenticity of these pieces in which the design is based on the material whilst carefully worked from traditional craft techniques, fit perfectly within the latest trends. We also propose to recover these tra-ditional pieces in our homes, where initially were only used as every day helpful objects, and give them a new

life as decorative objects such as plant pots, trays, fruit bowls or decorative wall pieces.

Artesanía de Galicia also includes contemporary designed products made by traditional procedures. We have a good range of newly designed samples where traditional techniques have been applied, as well as new con-temporary designed products from makers who work with contemporary resources.
