

## Decor paper for surface upgrading of wood-based panels

Decor paper is a technically advanced, highly engineered, and sustainable product that provides an excellent surface for decorative printing and impregnation for use in the production of furniture, flooring, and other interior and exterior building material applications.

Tailor-made decor paper solutions meet the highest quality demands and contribute to making sustainable premium living and working spaces accessible to everyone.

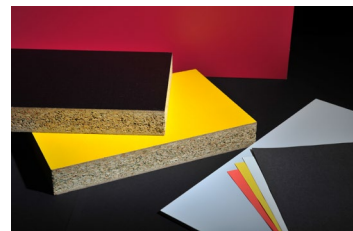

Ahlstrom-Munksjö Decor Solutions provides the broadest high-quality decor paper assortment in the industry, specializing in various end-use applications, including Print Base papers, Low- and High-Pressure Lamination papers, and Pre-impregnated papers.

We produce tailor-made, premium decor papers in a wide range of colors on our high-performance paper machines. Most decor papers are printed with creative designs – e.g., wood grain, stone, or abstract designs. Printed and solid color decor papers are typically impregnated with melamine resin and laminated onto wood-based panels such as particle board or MDF. Surfaces utilizing impregnated decor paper offer several advantages, including unlimited design variations, scratch and fade resistance and preserve valuable resources such as rare tropical woods.

While in the 50s, it was important to have a functional and resistant material for cost-efficient furniture production, today, the application spectrum is much wider and the technical requirements much more demanding.

Decor paper-based surfaces are essential for today's modern way of living and contribute to a more sustainable society.
