Vestas secures 108 MW order in Australia with Tilt Renewables

Vestas has secured an order for Tilt Renewables' 108 MW Waddi Wind Farm in Western Australia. This project is a major step in expanding Western Australia's clean energy capacity, strengthening the state's energy grid, while supporting the State Government's strategy to accelerate the transition to a secure, reliable, clean, and affordable electricity supply.

The order includes supply and installation of 18 V162-6.0 MW EnVentus wind turbines at a 125-metre hub height, optimised to boost energy output. The order also includes a 30-year service agreement, ensuring reliable, long-term clean power for local communities and industry.

The Waddi Wind Farm underscores the strength of the Vestas–Tilt Renewables partnership, which has delivered some of Australia's largest and most complex wind projects: from Salt Creek to Dundonnell and Rye Park and continues to advance the nation's renewable energy transition through dependable, secure, utility-scale solutions.

Anthony Fowler, CEO, Tilt Renewables, said: *"Waddi Wind Farm is a proud investment in Western Australia, not only generating clean, affordable energy for around 68,000 homes but also delivering real benefits for the Dandaragan region. By working closely with local communities and employing local businesses, we're ensuring this project leaves a lasting legacy. Together with Vestas, we're building a reliable, long-term source of clean power that reduces carbon and strengthens the Wheatbelt's energy future."*

Purvin Patel, Regional President, Asia Pacific, Vestas, added: *"Waddi is a clear demonstration of Vestas' commitment to delivering high-quality, utility-scale wind projects that help accelerate the energy transition in Australia. Our partnership with Tilt Renewables continues to raise the bar for engineering excellence, reliability, and long-term service, and we are proud that our technology will support Western Australia's ambition to build out a stronger, cleaner electricity system."*

Delivery of components will commence in the first quarter of 2027, commissioning to commence in the third quarter of 2027. Waddi Wind Farm, located 200 km north of Perth, will provide more than 150 new jobs in construction and six permanent jobs once operational.

About Vestas

Vestas is the energy industry's global partner on sustainable energy solutions. We design, manufacture, install, and service onshore and offshore wind turbines across the globe, and with more than 197 GW of wind turbines in 88 countries, we have installed more wind power than anyone else. Through our industry-leading smart data capabilities and unparalleled more than 159 GW of wind turbines under service, we use data to interpret, forecast, and exploit wind resources and deliver best-in-class wind power solutions. Together with our customers, Vestas' more than 37,000 employees are bringing the world sustainable energy solutions to power a bright future.
