

Erik Severinson

Head of Strategy & New Cars

Erik joined Volvo Cars after graduating with a MSc in business administration and has covered various controller roles in the company. Erik moved from head of finance for R&D to being responsible for all central and industrial functions, and later, to the controlling function and financial steering of the company. After which he headed up the industrial strategy within the company in which he was leading Volvo Cars' electrification from an industrial perspective and is strategically overseeing production, purchasing, supply chain, quality and sales/production planning. In this role he also was responsible for setting up the Northvolt collaboration around new battery development and production in a unique collaboration

Today, Erik leads Volvo Cars' strategy and program management function and is strategically overseeing as well as managing the product programs of our future product portfolio where we will deliver the next generation of our electric, connected and smart cars.
