

## **Modirum Platforms Appoints Niko Hurskainen as Chief Technology Officer**

*Espoo, Finland, May 28, 2026* – Modirum Platforms today announced the appointment of **Niko Hurskainen** as Chief Technology Officer (CTO). In this role, Niko will lead Modirum Platforms' global technology strategy, platform architecture, and research & development operations.

Niko will play a central role in accelerating the company's next phase of growth across intelligent communications, public safety, telecom, AI-driven situational awareness, and mission-critical digital infrastructure.

As CTO, Niko will focus on:

- Strengthening the company's integrated platform strategy across telecom, critical communications, and AI
- Accelerating AI-enabled product development and operational efficiency
- Expanding scalable cloud-native and sovereign technology capabilities
- Supporting international growth and strategic customer programs across Europe, the Middle East, and the Americas
- Advancing the company's long-term vision of building intelligent platforms for resilient and secure societies

Modirum Platforms is building a next-generation European technology platform for intelligent communications and situational awareness. Niko's leadership will be instrumental as we continue to strengthen our AI capabilities, platform competitiveness, and international delivery capacity.

"This is an important milestone in Modirum Platforms' growth journey. Niko brings strong technology leadership, extensive experience in scalable software platforms, and a deep understanding of mission-critical environments," said **Tero Silvola**, CEO of Modirum Platforms.

"Modirum Platforms has a unique combination of deep domain expertise, strong customer relationships, and ambitious international growth targets. I am excited to join the team and contribute to building scalable, intelligent, and secure platforms that help organizations operate more efficiently and with greater resilience in increasingly complex environments," said **Niko Hurskainen**.

Modirum Platforms continues to invest heavily in AI-driven software platforms that support telecom operators, public safety authorities, critical infrastructure operators, and regulated industries. The company's solutions focus on situational awareness, secure communications, operational resilience, and intelligent automation.
