Provade Helps Companies Manage Risks of Employee and Asset Tracking

New white paper outlines the importance of creating a solid identity management strategy to reduce risk and maximize investment

MILWAUKEE, August 13, 2013 – [Provade, Inc.](#), an industry leader in enterprise [Vendor Management System \(VMS\)](#) development for global contingent workforce spend management, is educating companies on the importance of using an identity management solution to track and administer individual workers' authentication, authorization and privileges within a business system. To support this mission, Provade has launched a new white paper entitled "[Identity Management: The First Step to Full Visibility](#)."

"If you are looking to increase security for your organization by accurately tracking individuals and their deployment histories, a solid identity management solution is key to your success," said Edward Jackson, President of Provade. "This type of application offers an additional level of security and traceability within your organization with full integration into HR and asset management systems."

As the global workforce continues to grow, an identity management strategy is increasingly important to address security concerns and streamline asset management. An effective identity management tool accurately tracks individuals and their deployment history, coordinates asset assignments and recovery, and aligns with varied global workforce management requirements. Provade's white paper highlights how an identity management system enables a company to create a complete audit trail of all resource activities without duplicate effort.
