

COMPONENTS FOR TIPPER BODIES

SSAB Shape delivers pre-processed components for tipper bodies directly to you. According to your drawings, our well-equipped service centers cut, bend and laser weld, so you don't have to. Combining SSAB premium steel products and specialized service centers opens the door to entirely new possibilities for increasing your productivity and avoiding large investments in cutting and bending machines.

THIS IS SSAB SHAPE

SSAB Shape offers a wide range of services for the development and production of high strength steel products. From pre-fabrication like bending and cutting, to full product development projects, we work to streamline manufacturing and make you more competitive.

SOLUTIONS BEYOND STEEL

With over 50 years of experience in high strength steel production and design, SSAB will supply you with a full time support network highly knowledgeable in the tipper industry. SSAB Shape can provide you with the best materials, production techniques, processing equipment as well as an in house engineering team. Your tipper applications will become more competitive than ever with the help of SSAB Shape.

The goal is to improve your products and your business – and we start by asking you the right questions. In addition to quickly responding to your specific processing needs, we offer the joint development of components with close collaboration.

At SSAB Shape, finding innovative solutions is about more than just the material. It begins with understanding your challenges and ends with your success.

ENDLESS POSSIBILITIES

Tipper body parts can be produced and delivered in many shapes, from flat laser-welded wide sheets to full kits of components ready-to-assemble.
